

Everything you need on board at the right time, the right place and with the appropriate quantity – distributed to every stations of your network.

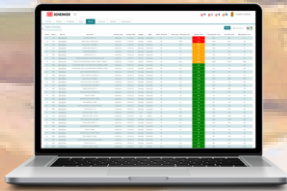

Improve and generate savings: DB Schenker brings in solutions to improve cost control, lead time, and visibility of all your in-flight items stored or travelling around the globe. Take back the control and achieve a cost-effective and operationally secured supply chain.

**Control Your Supply Chain****Improve Your Visibility****Save Costs**

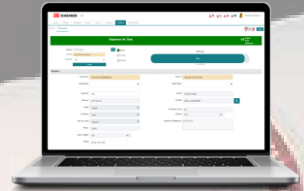

SMART Tool: Our online tool SMART is giving you the full control of your in-flight supply chain. It is the link between your central store, your stations inventories and your replenishment needs within your global network. It enables the replenishment model to be switched from a PULL to PUSH strategy.

Daily forecast to predict stations inventory levels and suggest replenishment orders.

Visibility on inventory levels across the entire network with alerts on shortages and overstocking

Stock replenishment order management with end-to-end visibility on order fulfilment and transportation.
