### **Surcharge for Green Transport – “Green Deal”**

As promised, we are committed to carrying out our part of the green transition. We are now in a position where a significant portion of our distribution in cities and towns is done using electric trucks and vans, as well as some running on biogas. In total, this accounts for approximately 40% of our nationwide distribution in 2024. We are well on track to achieve carbon neutrality by the end of 2027.

The investments have been substantial, and going forward, we must maintain a high pace of investment to reach this goal. Changes in public support schemes have shifted a larger share of the cost onto the involved parties. This is a cost that Schenker cannot cover on its own. We undertake this as a societal responsibility for a better environment, but also for our customers who highly value using a supplier committed to eco-friendly logistics solutions.

Starting from July 1st, we will introduce a surcharge for national System shipments. Please refer to our website for updated fees and additional information.

We appreciate your understanding of the necessity of these measures, as we work together to implement the green transition, and these surcharges reflect the actual efforts being made.

If you have any questions about the Green Deal, feel free to contact your local sales representative.

Best regards  
for SCHENKER AS
