- Actionable data around exceptions from planned situations

**Find out more**

- Your inventory on the waves
- Take control of your freight
- As if you were on board
- Plan ahead with solid insights

# Key values for your success

Get your shipment and container augmented reality, using dynamic event data and boosting reliability

## Clear visibility & complete transparency

Visibility technology is becoming increasingly vital as organizations struggle to track their in-transit goods and predict availability. **DB SCHENKER | ocean bridge** offers you strong cost control and governance to monitor critical events and supply chain disruptions.

The tool provides full visibility across services, helping to prevent revenue loss. Early detection of delays allows you proactive planning, minimizing costs and benefiting your P&L.

## Adapting to unforeseen challenges & pre-empting exceptions

By pairing dynamically augmented visibility with artificial intelligence and machine learning **DB SCHENKER | ocean bridge** allows you to take preventive action before challenges occur.

## Benefits from active exception management

### Reduce transportation costs

Minimize the added cost of delays by effectively managing the threat of disruptions during transit.

### Reduce demurrage and detention fees

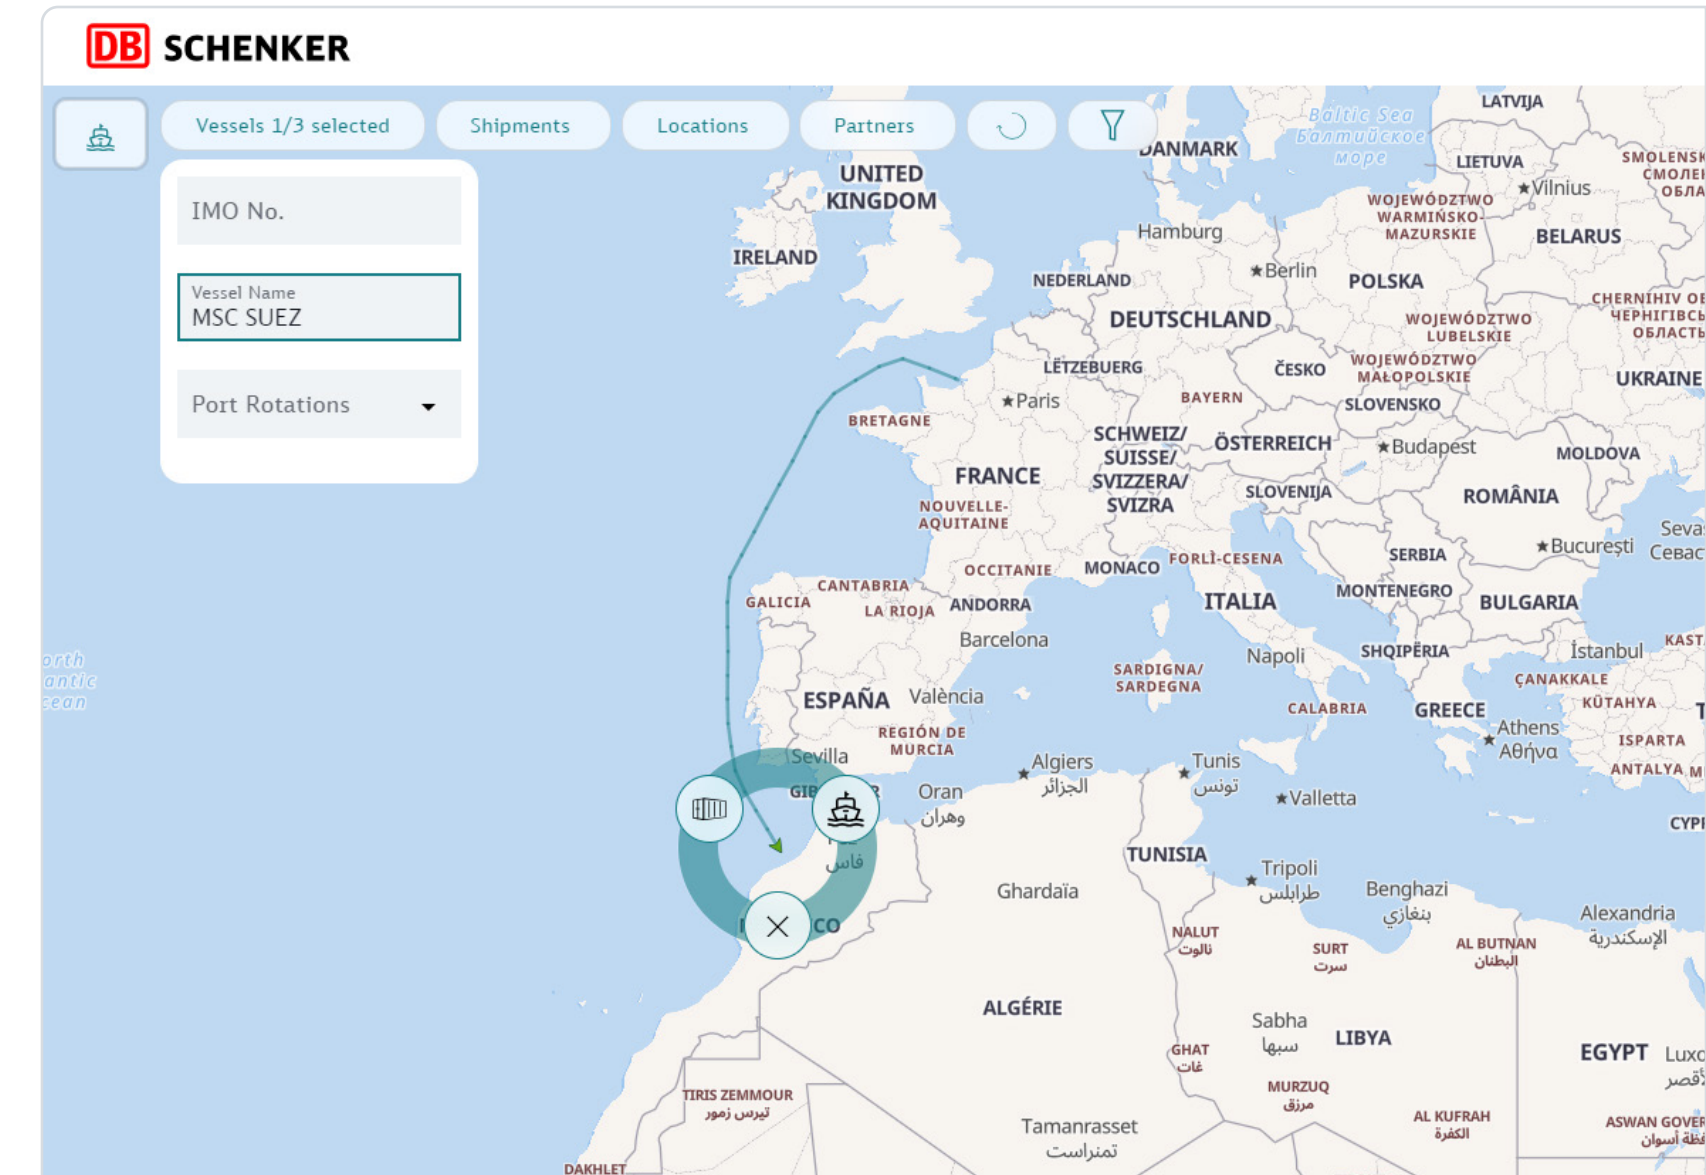

Significantly reduce unnecessary demurrage and detention charges by managing delays and disruptions, resulting in significant cost savings.

### Improve customer satisfaction

Keep customers informed of delays and provide reliable, dynamically adjusted ETDs, ETAs and ETBs to maintain confidence and satisfaction.

### Transparent product availability

Give customers confidence in product availability with clear and timely information, even when containers are delayed or disrupted.

Please contact your local **DB SCHENKER** office for access. They will guide you through the steps to begin your **DB SCHENKER | ocean bridge** experience.
