

Fuel adjustment rules and the algorithm for determining the percentage of the fuel correction ratio for domestic land shipments

1. Fuel adjustment is the formula of automatic modification of the remuneration of a logistics operator for transport services performed in accordance with the price changes of diesel oil independent of the logistics operator.
2. Applied by Schenker sp. z o.o. the fuel adjustment formula is characterized by the following rules:
 - 2.1. The fuel correction reflects changes in fuel prices.
 - 2.2. The current fuel price level is determined based on wholesale diesel oil prices at PKN Orlen, which allows for actual reference to changes in fuel prices on the Polish market, without taking into account the impact of gas station margins in individual parts of Poland on the dynamics of average fuel prices.
 - 2.3. Determination of the average price of fuel takes place on a biweekly basis.
 - 2.4. The fuel correction mechanism works both at increases and at fuel price reductions, which results in an increase or decrease of the price for the shipment service in relation to the price in previous periods.
 - 2.5. Changes to the current value of the indicator are not made at each change of the fuel price, but only after exceeding the specified sensitivity threshold.
 - 2.6. The fuel correction is shown on the invoices of Schenker sp. z o.o. as a separate item, which allows the client to closely observe its impact on logistics costs.
3. Fuel cost adjustment algorithm.

Calculation of the value of the fuel cost adjustment index is based on the following principles:

 - 3.1. The value of the fuel cost adjustment ratio is evaluated biweekly and is applicable for the next two weeks.
 - 3.2. The value of the fuel cost adjustment ratio for the next period is published on the website <https://www.dbschenker.com> on Friday in the week preceding the period to which it relates (e.g. the index for April 11- 24, 2022 is published on April 8, 2022. If above mentioned date falls on the bank holiday, value of the fuel cost adjustment ratio is presented on the first working day after bank holiday).
 - 3.3. The average diesel oil price in a given period is calculated as weighted average wholesale price of 1 m³ diesel oil in Polish refinery PKN Orlen, and is taken from period of 14 calendar days back from the date of announcement of the fuel adjustment for the next period.
 - 3.4. The average base price is 3.052 PLN/m³.
 - 3.5. Change of the value of fuel cost adjustment ratio is applied when average fuel price differs from base price more than 6% (or its multiple).
 - 3.6. Exceeding each threshold of 6% will result in changing value of fuel price ratio by 1.85% (or its multiple), in accordance with the table below

średnia cena paliwa [zł/m3]		Wskaźnik korekty paliwowej
od	do	
5067	5249	20,35%
5250	5432	22,20%
5433	5615	24,05%
5616	5798	25,90%
5799	5981	27,75%
5982	6165	29,60%
6166	6349	31,45%
6350	6532	33,30%
6533	6715	35,15%
6716	6898	37,00%
6899	7081	38,85%
7082	7264	40,70%
7265	7447	42,55%
7448	7630	44,40%
7631	7814	46,25%
7815	7997	48,10%
7998	8180	49,95%
8181	8363	51,80%
8364	8546	53,65%
8547	8729	55,50%
8730	8912	57,35%
8913	9095	59,20%

- 3.7. Amount of the fuel cost adjustment in land domestic business is calculated with the appropriate index and based on shipment freight amount (without additional services).
 - 3.8. The value of fuel cost adjustment of a given consignment is set on the basis of the date of sending.
4. The changes in the fuel correction ratio determined on the basis of the above algorithm do not constitute a change to this standard document.
5. Schenker Sp. z o.o. as of 2024/03/11, until revoked, introduces special rules of determining fuel correction ratio by introducing minimum (not less than) value of the correction in the amount determined based on the average wholesale fuel price = 5 067 PLN/1m³
6. Schenker sp. z o.o. is entitled to amend or revoke it in this standard document at any time, or to revoke it and issue a new one, bearing in mind changes in the scope or organization of services provided, changes in the costs of providing services or changes in applicable law.
